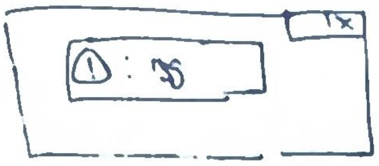
Raising Exceptions ::



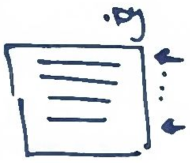
File Handling

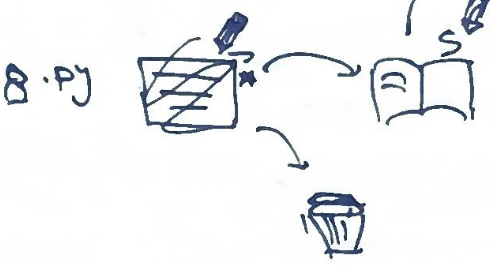
6 november

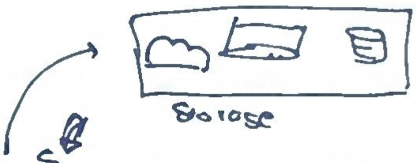
8.py

all the information we collection during execution was lost as soon as program reaches end

File I/O

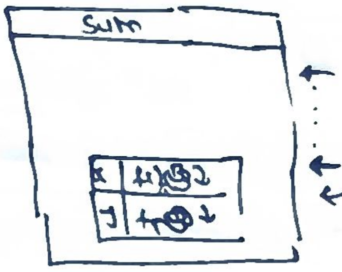






Storage

taking important info & storing it locally or in cloud



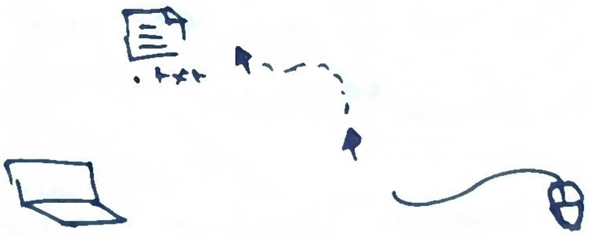
Hand you back some value

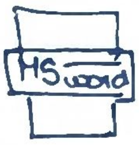
— xx —

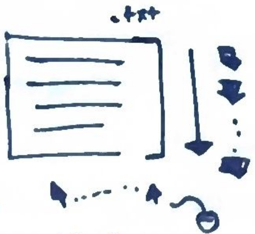
open ( )

.py ==

click on the file in Mac, pc



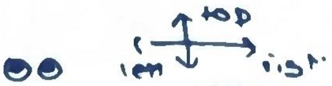




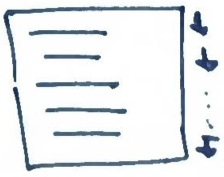
open

entire file & read

iterate each line



Yea!



open

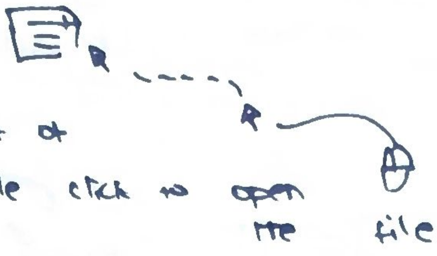
& iterate each line

Revision-2

Information lost after execution

Dumping into

open( )

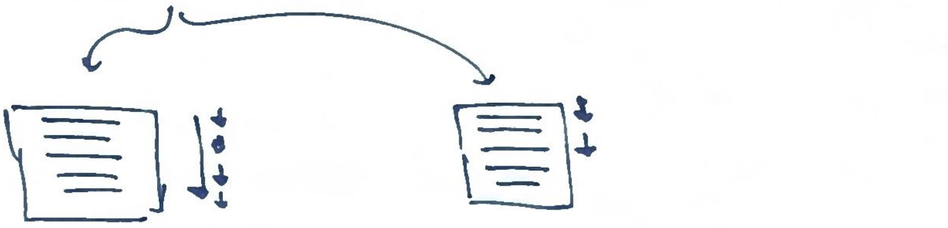


program equivalent of double click to open the file

write

erase & start at beginning

continue where we left

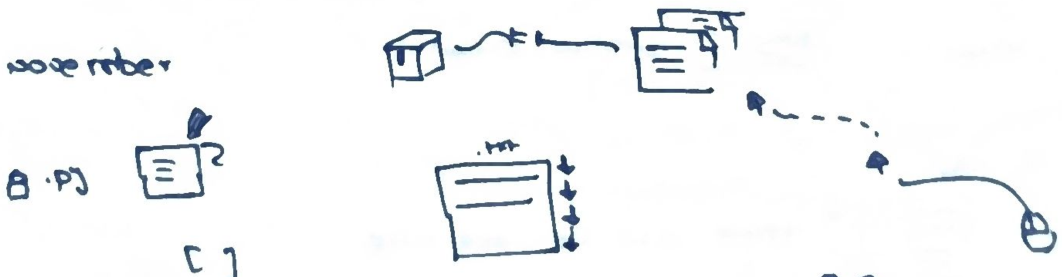


Read full file & iterate one line

Read one line at a time

23 : 00

→ remember



.py (.js) ==

[ ]

telling python to gather the data

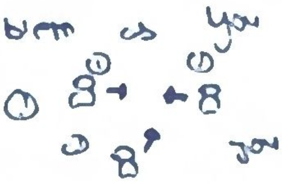
Read one line at a time

eyeballing it

Moving forward if you have any ; 3/4 odd one

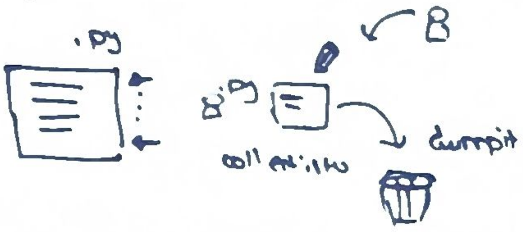
Someone already encountered the same problem as you

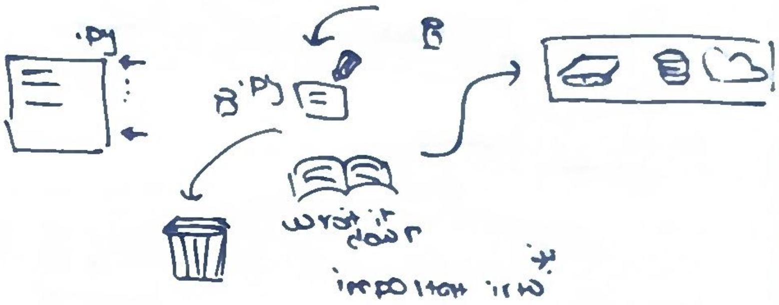
he/she may found solution answer to that



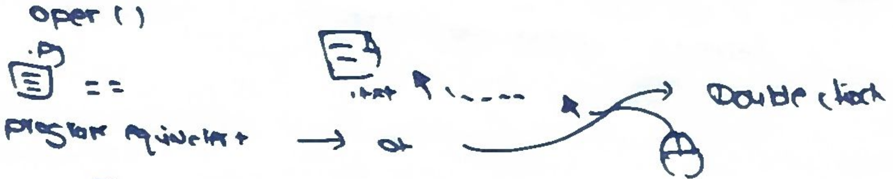
you Spiderman meme

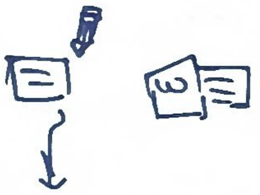
Revision-1





open()





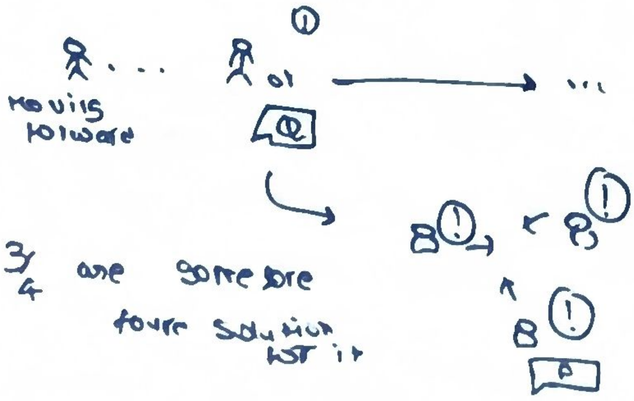
write

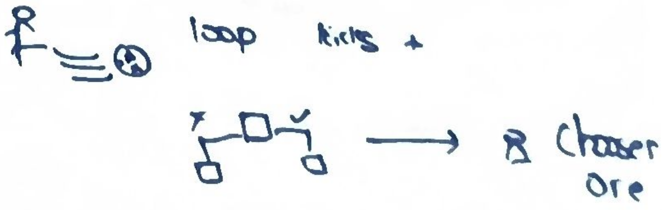
continue where we left at

implicit default

Read full files iterate one line

iterate one line at a time





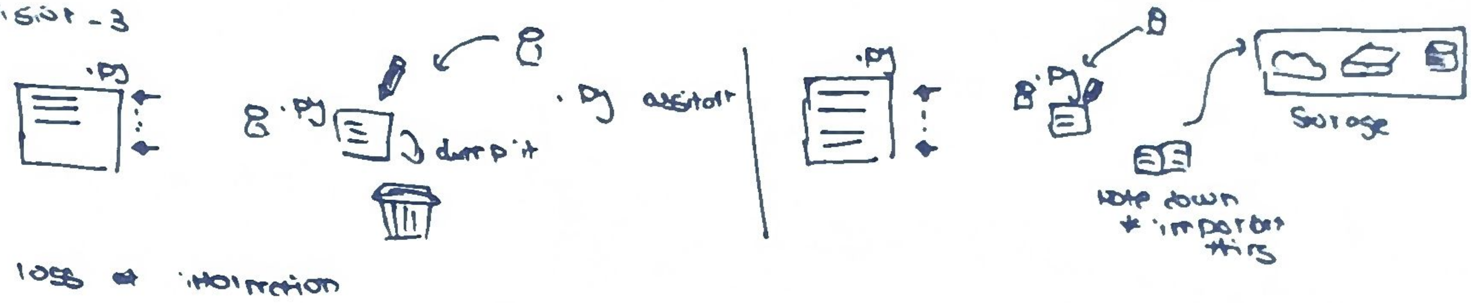
38:00

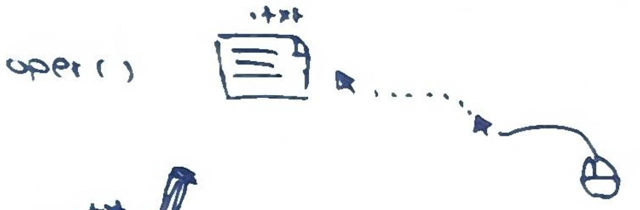
② 7 November ②

If you know in advance split(',')
return

+6:00 min

Revision - 3





.py == program equivalent of Double click to open
