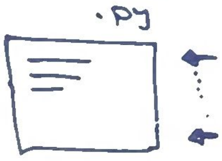
logic

print function

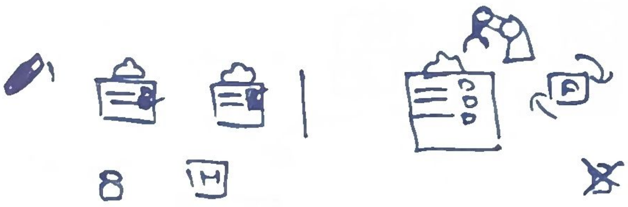
IDE

Unit testing ::



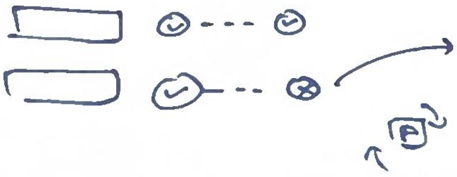
get in practice sooner rather than later

of testing you code by writing code



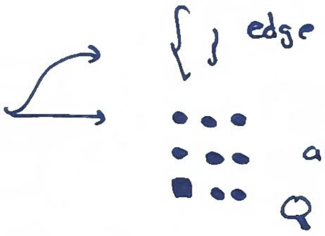
assert

let me check then?



AssertionError

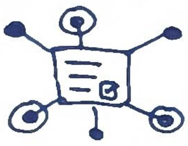
Simulating errors



edge cases

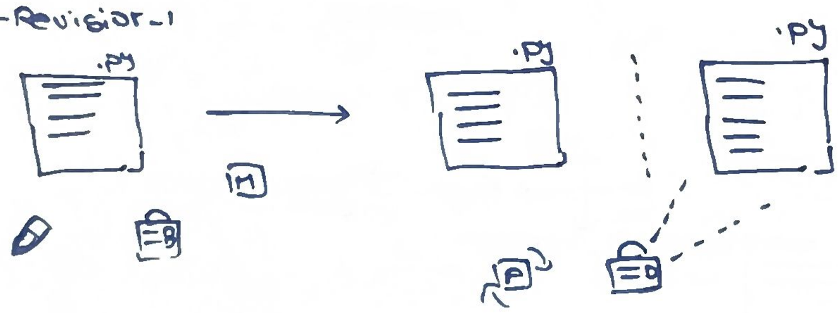
anomalies

Unit testing



Formal way of saying testing individual units of yr program.

— Revision-1



Better practice two write code to test your code

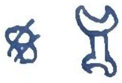
assert

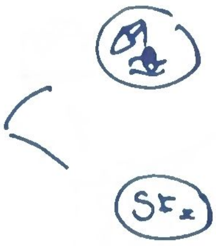
let me check then

Assertion Error

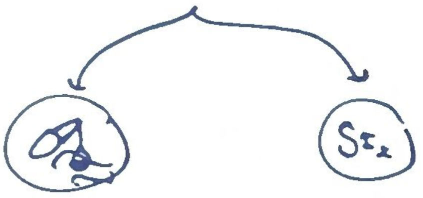
line{ }31 lines

It would be nice to have a tool that handles





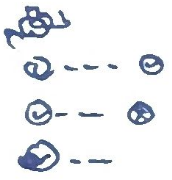
pytest

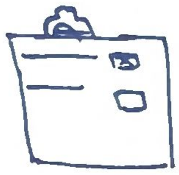


error handling

passing into

func()



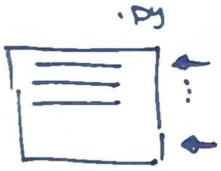


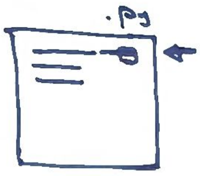
func()

at first glance; this look cryptic; over time; you will gain familiarity

28:00 min

Revision-2 ::





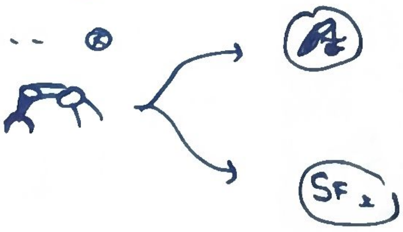
write a code to test your code

Boldy proclaim something is said to be true

assert

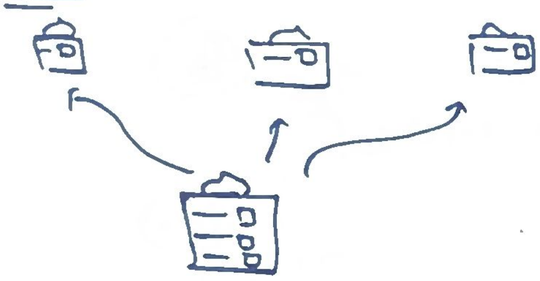
.py

let me check the

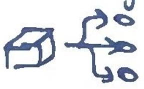


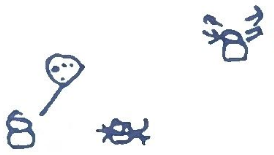
tool that handles error handling & passing into

4 November



Category of test





Boss disappointed

You could have caught it

Revision - 1

write code to

your code test

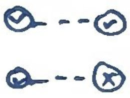
Syntax ABC

assert

.py

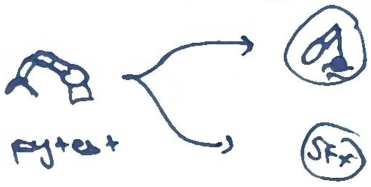
boldly proclaim something to be true

let me check

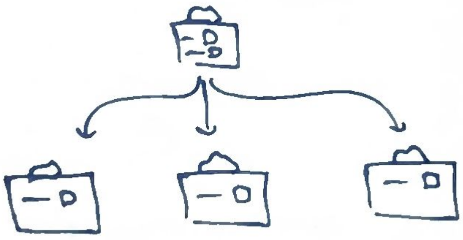


assert Boolean Exp

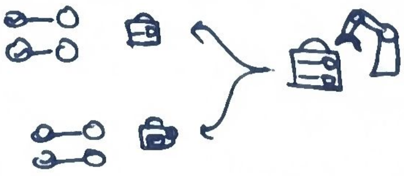
T F



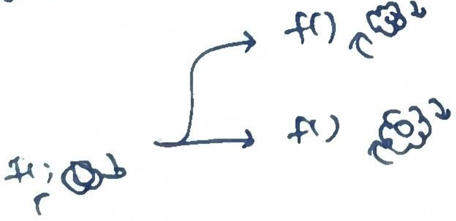
Nice to have a tool that handles Exception passing into



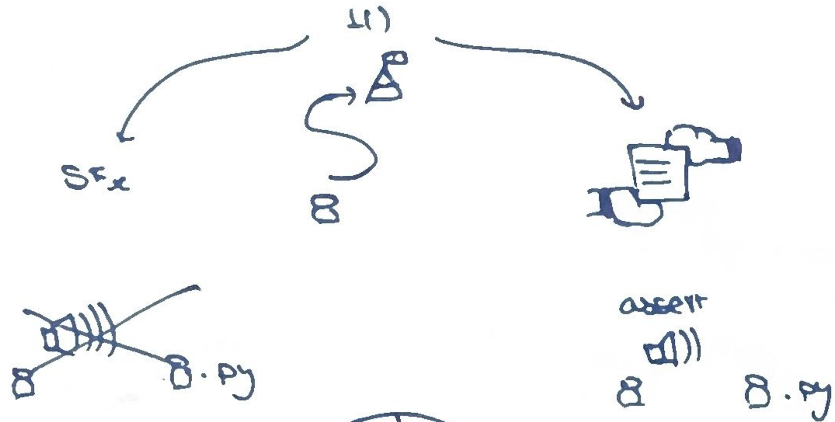
Categories of test

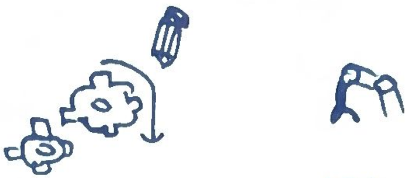


Revision - 3



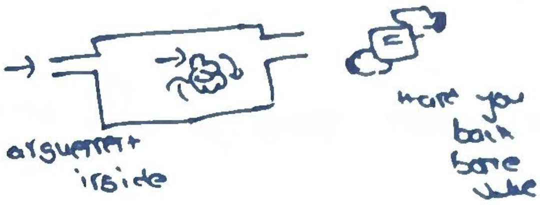
5 November





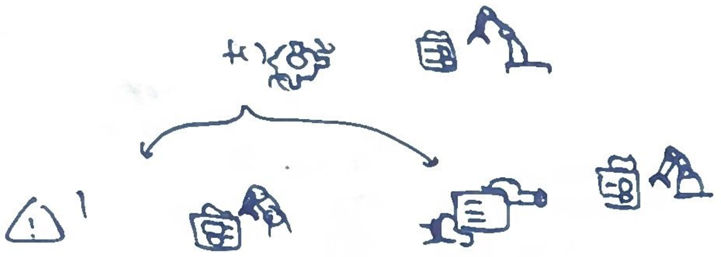
Designed to test f()

lean :: return



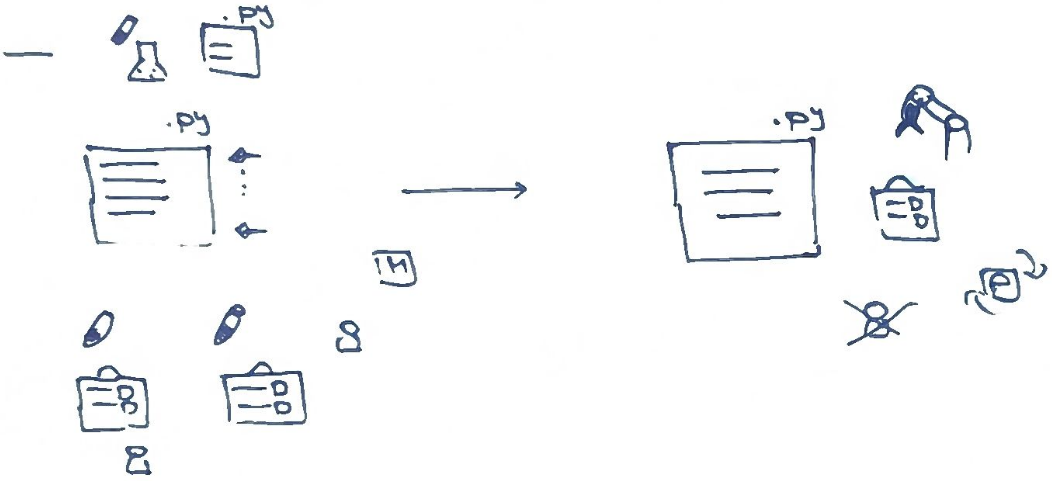
argument inside
have you back some value

Do something to the data



testing for Exception

testing return value

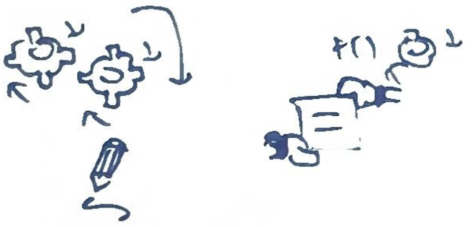


write a code to

test your code

assert

Boldly proclaim something to be true

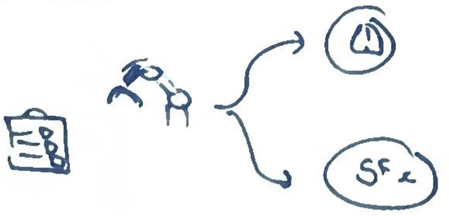


Designed specifically for f()

that have you back value

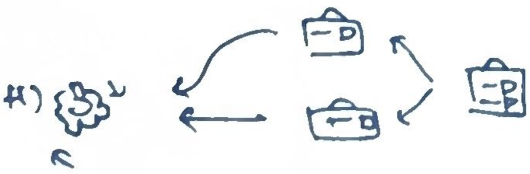
AssertionError ⚠ SFx

Nice to have a tool that handle ⚠ are SFx

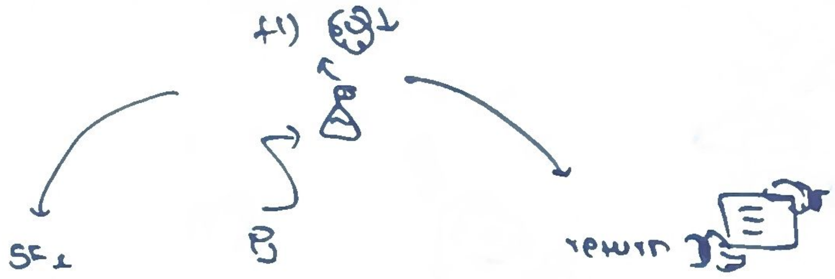


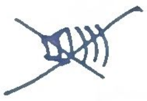
pytest

passing into

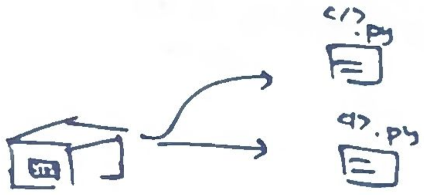


category of tests





work around would be $\boxed{\text{f strings +"}}$



package (folder which contain multiple (one or / 1 or more) </> .py module
